

PROJECT PROPOSAL

TITLE: YOUTH INVESTMENT, ENTREPRENEURSHIP AND EMPLOYMENT LINKAGE SYSTEM

CHAPTER ONE

1.0 Introduction

Youth unemployment has become one of the major social and economic challenges affecting many countries, especially among university graduates. Despite having academic qualifications, skills, and innovative business ideas, many young people fail to secure employment opportunities or financial support to start self-employment activities. At the same time, organizations, investors, and training institutions face difficulties in identifying capable and skilled youth who qualify for available opportunities. The lack of a centralized digital platform connecting youth with employment, investment, and training opportunities contributes significantly to this problem.

This project proposes the design and development of a Youth Investment and Employment Linkage System that will serve as a web-based platform for connecting youth with investors, organizations, and available opportunities. The system will allow youth to create profiles, showcase their skills and business ideas, and apply for jobs, training programs, and funding opportunities. Investors and organizations will be able to post opportunities and review applications submitted by youth.

1.1 Background of the Study

Technology has continued to transform different sectors by improving communication, information management, and access to opportunities. In the employment sector, digital platforms have simplified the process of connecting job seekers with employers. However, many existing systems mainly focus on job advertisements and applications, while neglecting other important areas such as youth investment support, skill development, and entrepreneurship opportunities.

Many university graduates remain unemployed not because they lack skills, but because they lack access to information, funding opportunities, mentorship, and professional networks. A digital linkage system can help bridge this gap by providing a centralized platform where youth, investors, and organizations can interact and share opportunities effectively.

1.2 Problem Statement

Many youths and university graduates continue to experience unemployment due to limited access to employment information, investment opportunities, and entrepreneurship support. Existing employment platforms mainly focus on job vacancies and do not adequately support youth with business ideas or investment needs. In addition, there is no centralized system that integrates employment, training, and investment opportunities in one platform. As a result, many youths fail to utilize available opportunities that could improve their economic situation and career development.

1.3 Main Objective

To design and develop a Youth Investment, entrepreneurship and Employment Linkage System that connects youth with employment, investment, and training opportunities through a centralized digital platform.

1.4 Specific Objectives

- I. To design a user-friendly system that allows youth to register and manage their profiles
- ii. To develop a platform where youth can showcase their skills, qualifications, and business ideas
- iii. To enable investors and organizations to post employment, investment, and training opportunities
- iv. To implement an application and tracking system for youth opportunities
- v. To develop a searchable database for managing users and opportunities

1.5 Scope of the Study

This project will focus on the design and development of a web-based system that connects youth with employment, training, and investment opportunities. The system will allow youth to create profiles, apply for opportunities, and track application progress. Investors and organizations will be able to post opportunities and review applications. Also, the study will not involve online payment processing, mobile money integration but will focus only on solving the problem employment among youths.

1.6 Significance of the Study

The proposed system will help improve access to employment and investment opportunities among youth and graduates. It will also assist organizations and investors in identifying skilled and qualified youth for available programs. Furthermore, the system will contribute to the use of information technology in addressing unemployment challenges among young people.

1.7 Methodology

The project will follow the System Development Life Cycle (SDLC) methodology. The following phases will be involved:

- i.Requirement gathering and analysis
- ii.System design
- iii.System implementation
- iv.Testing and debugging
- v.Documentation and deployment

Data collection methods may include interviews, questionnaires, and online research.

1.8 Technologies to be Used

The system will be developed using the following technologies:

HTML – for designing web page structure

CSS – for styling and user interface design

JavaScript – for interactivity and form validation

PHP or Python – for server-side processing

MySQL – for database management

XAMPP – for local server hosting

Visual Studio Code – for coding and development

1.9 Expected Outcomes

The project is expected to produce a functional web-based system that:

- I. Connects youth with employment and investment opportunities
- II. Improves access to training and entrepreneurship support
- III. Simplifies opportunity application and tracking
- IV. Enhances information sharing between youth and organizations

1.10 Project Time Frame

The project is expected to be completed within eight (8) weeks, covering planning, analysis, design, implementation, testing, and final documentation.

CHAPTER TWO

LITERATURE REVIEW

2.0 Introduction

This chapter reviews existing studies and systems related to youth employment, investment support, and digital opportunity management platforms. It also identifies research gaps addressed by the proposed system.

2.1 Existing Systems

Most existing employment systems focus mainly on job advertisements and recruitment processes. Examples include online job portals and recruitment platforms. However, these systems do not integrate investment opportunities, youth business ideas, and entrepreneurship support in one centralized platform.

2.2 Research Gap

Existing systems lack integrated support for youth empowerment through employment, investment, and entrepreneurship opportunities. Therefore, the proposed system aims to provide a unified platform that combines these services for youth and graduates.

CHAPTER THREE

SYSTEM ANALYSIS AND DESIGN

3.1 Functional Requirements

The system shall:

Allow user registration and login

Allow youth to create and manage profiles

Allow posting of opportunities

Allow youth to apply for opportunities

Allow tracking of application status

3.2 Non-Functional Requirements

User-friendly interface

Secure login system

Fast data retrieval

Reliable database storage

3.3 Proposed System Features

User authentication

Youth profile management

Opportunity posting

Application tracking

Search and filtering system

CONCLUSION

The proposed Youth Investment and Employment Linkage System aim to provide a digital solution for connecting youth with employment, investment, and training opportunities. The system is expected to simplify information access, improve youth participation in economic activities, and support efforts to reduce unemployment among graduates and young people.
